CRM RELEASE

10 June 2025 - VERSION 2.30.0

New features

Improved Mobile Experience: Vertical Layout for Letzone

We've enhanced Letzone on mobile devices by changing the screen layout from horizontal to vertical. This update makes navigation smoother and completing information much easier when using Letzone on smartphones and tablets.

With this new vertically aligned journey, you'll enjoy a clearer, more user-friendly experience on smaller screens.

Improved Date Entry Validation on Property and Tenant Checklists

We've enhanced the date entry process in Property and Tenant Checklists to provide clearer and more accurate feedback when inputting dates.

Now, date entries are fully validated to ensure error messages only appear when necessary, making the checklist experience smoother and more reliable.

Open House viewing status updates

You can now cancel Open House viewings by updating the status to *Cancelled* and saving the record — in line with how regular viewings work. This ensures a consistent and reliable way to manage all types of viewing cancellations.

Photo uploads now supported via Contractor portal on mobile devices

Contractors can now easily and reliably add photos directly through their contractor portal, including when accessing the system on mobile devices.

This makes it easier to document job progress and communicate updates to everyone involved.

Additional updates & General Improvements

We're making further improvements to enhance speed and performance alongside system stability.
