# CRM RELEASE

**19 August 2025 - VERSION 2.35.0**

## New features

### Improved Journal Linking

We've made it easier to link journals between records by showing you more useful details up front.

Now, when you create a link, you'll be able to see:

- Whether a record is archived
- Email and phone numbers (for applicants, vendors and landlords)
- Property addresses

This helps you quickly choose the right record and avoids linking journals to the wrong one by mistake.

### Global search shows correct archive status

We've improved global search, so it now shows record status correctly.

It's now much easier to see which records are archived and which are active, helping you manage your relationships with clients and tenants with confidence.

### New Help Centre

We've launched a brand-new Help Centre, available directly from within iamproperty CRM.

It's a one-stop shop for support, with a fresh look that's easy to navigate, so you can quickly find the guidance you need. You can find it directly in the product or directly from here <https://helpcentre.iamproperty.com/hc/en-gb>

### Additional updates & General Improvements

We're making further improvements to enhance speed and performance alongside system stability.
